Buyer is required to send money to Joomlancers only when he decides to start a project and after final agreement has been uploaded. The money for project shall be credited to his balance on Joomlancers instantly per success. Then, he can choose one of the below methods to pay the providers:

- Transfer the whole money from his balance to selected providers for the project right away
- Send the amount into the workphase source, guarantee the payment for a specific Provider per mutual project agreement. The money is deducted from buyer's balance on Joomlancers but not yet reflected at Provider's account. Provider can get the money only after full delivery of work done.

All of above project payment options are offered to all users as an advanced, non-compulsory, free of charge method to help projects get completed smoothly. Joomlancers encourages its users to send and receive money with the workphase method because it's another great way to make sure everyone gets what they want from a project.
